

FIBRE CHANNEL INTERFACE UNIT

ABSTRACT OF THE DISCLOSURE

Fibre Channel interface apparatus and methods are disclosed. In one embodiment, a system is provided for interfacing with at least one node in a Fibre Channel network. The system includes at least one input interface that is couplable to receive a plurality of frames of data that are transmitted from or received at a node of the Fibre Channel network. An output telemetry interface is couplable to provide the received frames of data to a telemetry and/or recording device.
